How to Launch the UFood Project: Step 1: Setup Instructions

1. Open Project:

Open folder ufood-h2025-team-15-master in an IDE

2. Install Dependencies:

Code:

```
npm install
```

Step 2: Launching the Application 1. Run Development Server:

Start the development server to launch the application locally.

Code :

```
npm run dev
```

2. Access the Application:

Open your web browser and navigate to the specified address (usually <http://localhost:5173/>) to access the Vue restaurant directory web application.

Specifications:

-When the user clicks on "Hi (your name)", a list of two options will appear: either to go to the user page or to log out.

-The home button is the logo.

-To access a restaurant, click on the name on the card of the restaurant.

-To logo click on the profile icon

-To access profile, click on the profile icon beside the name of the user (on the navbar) then on **profile** after login

-To access anything on the website you need to log in first

- For the advanced features, I have chosen to implement the following two:

1. Display the user's photo using Gravatar

2. Provide suggestions for restaurants similar to the current one
